CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS LIST
OF EXPERIMENT 15

15. Demonstrate Infrastructure as a Service (IaaS) by establishing a remote connection, launching the created VM image and run in your desktop.

Aim

To demonstrate Infrastructure as a Service (IaaS) by establishing a remote connection to the Virtual Machine created in Microsoft Azure, launching the VM, and accessing it remotely from a desktop.

Procedure

1. Sign in to the Microsoft Azure Portal.
2. Navigate to Virtual Machines and select the previously created Virtual Machine.
3. Verify that the VM status is Running.
4. Note down the Public IP Address of the Virtual Machine.
5. For a Windows VM, select Connect → RDP (Remote Desktop Protocol).
6. Download the RDP file provided by Azure.
7. Open the downloaded RDP file on the desktop.
8. Click Connect when the Remote Desktop connection window appears.
9. Enter the username and password configured while creating the VM.
10. Accept the security certificate warning if prompted.
11. Wait for the remote desktop session to establish.
12. The Azure Virtual Machine desktop will now appear on the local computer.
13. Open This PC/System Information and verify the VM's operating system, processor, and memory configuration.
14. Run a simple application or command inside the VM to confirm that it is functioning correctly.
15. Close the Remote Desktop session after completing the required operations.

Result

The Azure Virtual Machine was successfully launched and accessed through a remote desktop connection. The VM was run remotely on the desktop, demonstrating the Infrastructure as a Service (IaaS) model using Microsoft Azure.
