

SAVEETHA SCHOOL OF ENGINEERING

CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS LIST

OF EXPERIMENT 19

19. Create a Storage Service and Check Public Accessibility

Aim

To create a Storage as a Service environment using a public cloud service provider and verify the public accessibility of a stored file.

Procedure

1. Log in to the AWS Management Console.
2. Navigate to Amazon S3, the cloud object storage service.
3. Click Create Bucket and provide a unique bucket name.
4. Select the required AWS region for storing the data.
5. Configure the bucket settings and create the bucket.
6. Open the newly created bucket from the S3 dashboard.
7. Click Upload and select a sample file from the local computer.
8. Upload the selected file to the S3 bucket.
9. Verify that the file appears successfully in the list of stored objects.
10. Open the permissions or access-control settings of the bucket/object.
11. Configure the required access policy to allow public access to the test file.
12. Save the changes and open the properties of the uploaded file.
13. Copy the Object URL generated for the file.
14. Open the URL in a separate browser or another device.
15. Verify that the uploaded file can be accessed successfully through the public URL.

Result

A cloud storage service was successfully created and a file was uploaded to the storage bucket. The public accessibility of the stored file was successfully verified using its object URL.
