CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS

LIST OF EXPERIMENT 2

2) Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS.

SOL

AIM:

To design and implement a simple cloud-based Flight Ticket Reservation System using Zoho Creator and deploy it as a Software as a Service (SaaS) application, demonstrating relational database design via multi-table lookups, multi-user role simulation, and shared cloud database access through a web browser.

PROCEDURE:

- Sign In: Sign in to the Zoho Creator cloud platform using the registered student account credentials.
- Application Shell: Create a completely fresh standalone application by selecting the Create from Scratch option and name it SaaS Experiment 2 Flight Reservation.
- Form 1 (Passengers Table): Design the first data entry form named Passengers, adding a Name field labeled Passenger Name and an Email field labeled Email. Publish and save the form configuration.
- Form 2 (Flights Table): Design the second data entry form named Flights, adding a Single Line text field labeled Flight Number and two Drop Down menus labeled Source and Destination containing identical city routing options (*Chennai, Mumbai, Delhi*). Save the form.
- Form 3 (Reservations Relational Table): Create the third form named Reservations to act as the relational junction table connecting passengers to scheduled flights:
 - Drag a Lookup Field linking directly to the Passengers form, choosing Passenger Name as the active display value.
 - Drag a second Lookup Field linking directly to the Flights form, choosing Flight Number as the active display value.

- Add a Number field labeled Seat Number to capture specific booking details.
- **Report Generation:** Generate standard list view reports for Passengers, Flights, and Reservations to enable real-time tracking, data filtering, and secure cloud search functionality.
- **Deployment & SaaS Access:** Click on the blue Access This Application button to compile and deploy the complete system live onto the Zoho cloud infrastructure.
- **Functional Cloud Testing:** Populate the live cloud application database by sequentially inserting 3 unique sample entries into the Passengers form, 3 entries into the Flights form, and executing cross-table relational links inside the Reservations form to simulate live tenant transactions.

SNAPSHOTS:

The screenshot displays the 'Flight Reservation' application interface. On the left is a dark sidebar with navigation links: 'Passengers', 'Passengers Report' (highlighted in blue), 'Flights', and 'Reservations'. The main content area is titled 'Passengers Report' and features a table with two columns: 'Passenger Name' and 'Email'. The table contains three entries: Pooja Hegde (pooja@yahoo.com), Amit Verma (amit@gmail.com), and Ganta Ram Charan (charan@gmail.com). At the bottom of the table, it says 'Showing 3 of 3'. The top of the interface includes a header bar with 'Flight Reservation', a trial expiration notice ('Trial expires in 1 day'), and links for 'Upgrade', 'Edit this application', and 'Help'.

Passenger Name	Email
Pooja Hegde	pooja@yahoo.com
Amit Verma	amit@gmail.com
Ganta Ram Charan	charan@gmail.com

Flight Number	Source	Destination
6E-502	Mumbai	Delhi
I5-332	Mumbai	Chennai
AI-101	Chennai	Delhi

Select Passenger	Select Flight	Seat Number
Pooja Hegde	I5-332	11
Anil Verma	6E-502	13
Gantaram Charan	AI-101	12

RESULT:

A relational cloud-based Flight Ticket Reservation System application was successfully developed, integrated, and deployed using the Zoho Creator SaaS platform. The entire system was securely managed and updated live through an internet web browser without requiring any local software installation, successfully validating multi-user SaaS relational architecture concepts.
